Frameworks/Systems:

ReactJS, bootstrap, MySQL, Android

Programming Foundations:

OOP, Data Structure, Algorithm

Others:

Adobe XD, MS Office, Redux, GitHub, Machine Learning

Personal Projects

SMEBD

PHP | HTML | Bootsrap | MySQL

An online shopping site. I made this site using a local server. Where users can create accounts, put their products for sale, and buy products. There is also a cart system so that the users can purchase multiple products at a time.

Student Record System

PHP | HTML | MySQL

It is a website for managing students' records like profile, result, and notice.

Library Card

Java | XML

It is an android application to use as a digital library card instead of a physical card. By using it, users can book any available books and get them in a fixed time.

Bangladesh Fruit Info

Java | XML

It is an information-type application where users can find information on different kinds of fruits.

First Aid

Java | XML

This application provides first aid instructions. Helpful for first aid information.

Chat Application

Socket | ReactJS

A simple chat app. Users can use it to send simple text messages, pictures.

Hobbies

Reading Novels, Swimming, Exercise, Watching movies.
